chemicals—enhancing the calming effects of GABA (gamma-aminobutyric acid)—to reduce excessive anxiety, fear, and tension.

In simpler terms: Alprazolam helps your body and mind relax by gently slowing down overactive nerve signals that cause panic or uneasiness.

Alprazolam is widely prescribed for:

- Generalized Anxiety Disorder (GAD): Helps manage persistent worry, restlessness, and overthinking.
- Panic Disorder: Reduces sudden fear attacks, chest tightness, or shortness of breath.
